## MAIN FEATURES

- Remote updating the firmware of speed dome by RS485 bus
- It can set software ID, to support broadcast ID function.
- Automatically identify PEAMRAIN protocol or PELCO D/P protocol
- The dome can automatically identify SANYO, SONY, HITACHI series camera module.
- With function of auto focus, auto iris, auto white balance and auto backlight compensation etc. to have clear camera scene at any time.
- Built-in linear power for anti-surge and anti-Lightning protection
- According to application, with parts for alarm, wand-proof housing, shield, smoked cover, available
- Built-in function of protocol converter, to support RS485 communication and Manchester code.
- Preset position storage function, it can save 256 preset.
- 8 cruise tour, every tour can call 32 preset.
- 4 Pattern tour, to save the scan route by joystick.
- With automatic scan function, the scope of two limits can be planar scanned gradually, the scanning steps of the limits are optional.
- Automatic recover to movement before power failure.
- Time startup function, to start the movement in the time table have set.
- Power-up action, preset, cruise tour, pattern tour, auto scan, etc. available
- Park action. preset, cruise tour, pattern tour, auto scan, etc. available
- 360°continous panning.
- -5°~90°tilting rotation, automatic flip function, continuous tilting between -5°to 185°.
- Privacy masking function, maximum 24 masking zone available.
- Limit setting, to set the pan or tilt movement in a scope.
- It can display Temperature, angle, direction, zoom, etc.
- English user menu

# PRECAUTIONS

## ■In case of problem

- Do not use the unit if smoke or a strange odor comes from the unit, or if it seems not to function correctly. Turn off the power immediately and disconnect the power cord, and then consult your dealer or an Authorized Sanyo Service Center.

## ■Do not open or modify

- Do not open the cabinet, as it may be dangerous and cause damage to the unit. For repairs, consult your dealer or an Authorized Sanyo Service Center.

## ■Do not put objects inside the unit

- Make sure that no metal objects or flammable substance get inside the unit. If used with a foreign object inside, it could cause a fire, a short-circuit or damage. Be careful to protect the unit from rain, sea water, etc. If water or liquid gets inside the unit, turn off the power immediately and disconnect the power cord, and then consult your dealer or an Authorized Sanyo Service Center.

## ■Be careful when handling the unit

- To prevent damage, do not drop the unit or subject it to strong shock or vibration.

## ■Do not install this unit close to magnetic fields

- The magnetic fields may result in unstable operation.

## ■Protect from humidity and dust

- To prevent damage, do not install the unit where there is greasy smoke or steam, where the humidity may get too high, or where there is a lot of dust.

## ■Protect from high temperatures

- Do not install close to stoves, or other heat sources, such as spotlights, etc., or where it could be subject to direct sunlight, as this could cause deformation, discoloration or other damages.
- Be careful when installing close to the ceiling, in a kitchen or boiler room, as the temperature may rise to high levels.

## ■Cleaning

- Dirt can be removed from the cabinet by wiping it with a soft cloth. To remove stains, wipe with a soft cloth moistened with a soft detergent solution and wrung dry, then dry by wiping with a soft cloth.
- Do not use benzine, thinner or other chemical products on the cabinet, as this may cause deformation and paint peeling. Before using a chemical cloth, make sure to read all accompanying instructions. Make sure that no plastic or rubber material comes into contact with the cabinet for a long period of time, as this may cause damage or paint peeling.

- ★ The company may change due to improvements in product design and specifications, manuals, if the change cause product can not match the user manual ,please follow the product.
- ★ This brochure is owned the manufacturer, without permission of us, any unit or individual shall in any form or means of reproduction parts of the manual and all the contents.
- ★ **Beside usual functions, TC3032 Series High Speed dome with following function can be selective,**
  - Coaxial function;
  - Manchester control;
  - Alarm function □ 4ch inputs/2ch outputs □

# PART NAMES • SETTINGS • SETUP ①

## ●Part Names

### TC3032 □ Outdoor mount type □

1 Power supply cable    2 Control cable    3 Video output cable  
 4 Main housing    5 Base    6 Orientation slot  
 7 Camera drive    8 position lock    9 camera unit  
 10 Dome cover

## ● Setup location

Take the following points into consideration when setting up the camera

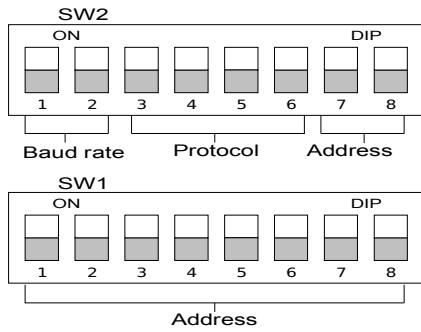

- The wall or ceiling used for installation should have enough strength to bear approximately 4 times the combined weight of the camera and bracket. Select a wall or ceiling that is strong enough to bear such a weight.
- Select a wall or ceiling surface that is completely flat, so that there will be no space between the base of the bracket and the wall.
- Please ensure the positions should be in the scope, no object to block the camera.

## ■ SETTINGS

■ the dip-switch pillar to set protocol, Baud rate, address, etc., please follow the manual in the drive unit to set, also can refer to followings,

1, Address settings □ SW1 and SW2 □

## PART NAMES • SETTINGS • SETUP ①

**Default setting:**

Address: Dip-switch is all OFF, that is 0, it can control the dome by any address.

Protocol: Auto match, the dome can be controlled by PEARMAIN, PELCO P/D

Baud rate: 9600bps.

**Address setup:**

Address is set by Binary system, as following, to refer to last row of the address sheet, sum of switch value of dips-switch is the address, e.g. 1, 3, 5 is ON, the switch value is 1, 4, 16, so the address is  $1+4+16=21$ .

**2, Address and Protocol:**

SW1 Address								SW2 Protocol							
Dip Switch	1	2	3	4	5	6	7	8	Dip Switch	1	2	3	4	5	6
0	OFF	Auto-match	OFF	OFF	OFF	OFF	OFF	OFF							
1	ON	OFF	PELCO P	ON	OFF	OFF	OFF	OFF	OFF						
2	OFF	ON	OFF	OFF	OFF	OFF	OFF	OFF	PELCO D	OFF	ON	OFF	OFF	OFF	OFF
3	ON	ON	OFF	OFF	OFF	OFF	OFF	OFF	PEARMAIN	ON	ON	OFF	OFF	OFF	OFF
254	OFF	ON	Sanyo	OFF	OFF	ON	OFF	OFF	OFF						
Switch Value	1	2	4	8	16	32	64	128	Manchester code	ON	OFF	ON	OFF	OFF	OFF
									Samsung	OFF	ON	ON	OFF	OFF	OFF

Address is 0, it can control the dome by any address.

Address is 255, 255 is broadcast address, any address of dome set, all the dome can be controlled.

The dome supports Coaxial function, if it is coaxial, please set the protocol to Auto-match

- ⦿ If the dome don't set the protocol, the dome will regard as "Auto-match".
- ⦿ Please refer to manufacturer to confirm what other protocol the dome support.
- ⦿ If it set software address (set dome address in its menu), it will not follow other address, address 0 and 255 is ineffective.

**3, Baud rate:**

SW2 Baud rate		
Dip Switch	7	8
2400	ON	OFF
4800	OFF	ON
9600	OFF	OFF
19200	ON	ON

## PART NAMES • SETTINGS • SETUP ①

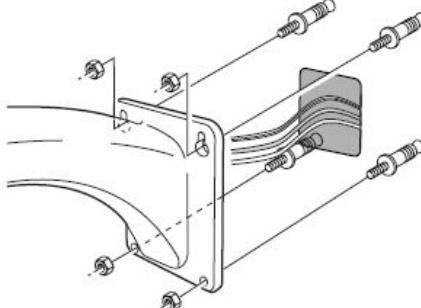

### ■Setup

## 1 Install the bracket.

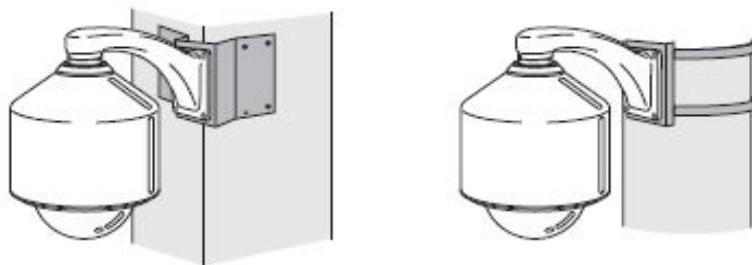

① While aligning the bracket base with the setup position, make four marks on the wall at the mounting bolt locations. Then make holes in these locations for the four M8 anchor bolts and insert the M8 bolts.

② Make a hole for the connection cables in the wall in the middle of the bracket installation surface, and pull the cables all together through the wall to the outside.

③ Pass the connection cables through the hole in the bracket, and then align the bracket base with the four M8 bolts and tighten the M8 nuts to secure the bracket in place.

- You can use the mounting brackets (sold separately) shown in the illustrations below to install the camera to the corner of a wall or to a pillar.

## 2 Connect the cables.

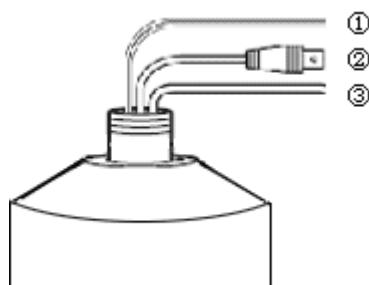

Connect all of the cables that have been passed through the bracket.

1 **Control cable:** Connect to the control cable out from the main cover (with shield), After making the connection, to envelop by insulation rubberized fabric.

2 **Video output cable:** Connect to the BNC connector that is coming out from the top of the main cover.

3 **Power supply cable:** Connect to the power supply cable out from the main cover. After making the connection, to envelop it by insulation rubberized fabric.

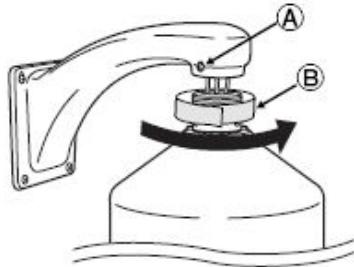

**NOTE:** Signs here be marked only in image, please identify the cable by the label in practice.

## PART NAMES • SETTINGS • SETUP ①

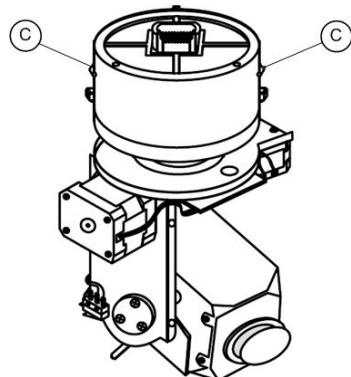

### 3 Install the main cover to the bracket.

Follow the arrow, to fix the dome housing B into the bracket A and tighten the screws.

#### 4 Install the camera unit.

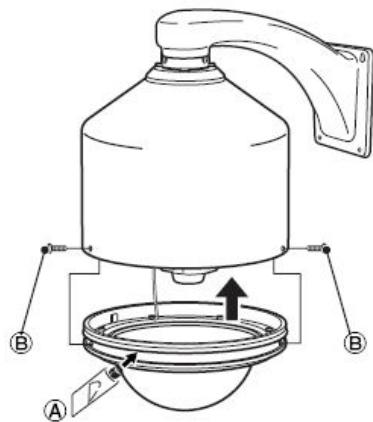

Fit the orientation slot of camera unit into the orientation slot of base, push down the camera unit till the bolt is complete fitness. To check the camera if it is be locked, in case the camera fall off.

#### 5 Install the dome cover.

After spread lubricating oil to the edge of dome cover A, fit the dome cover into the main cover and secure it by tightening the screws B.

Note: Be sure to remove the lens cap from the camera before installing the dome cover.

## PART NAMES • SETTINGS • SETUP ②

### PART NAMES

TC3032 Indoor mount

- 1 Power supply cable ② Control cable ③ Video output cable
- ④ Main cover ⑤ Base ⑥ Orientation slot
- ⑦ Camera drive ⑧ position lock ⑨ camera unit
- ⑩ Dome cover

## ■Setup

### 1 Install the bracket.

- ① While aligning the bracket base with the setup position, make four marks on the wall at the mounting bolt locations. Then make holes in these locations for the four M8 anchor bolts and insert the M8 bolts.
- ② Make a hole for the connection cables in the wall in the middle of the bracket installation surface, and pull the cables all together through the wall to the outside.
- ③ Pass the connection cables through the hole in the bracket, and then align the bracket base with the four M8 bolts and tighten the M8 nuts to secure the bracket in place.

### ■ Settings

Same settings according to aboves.

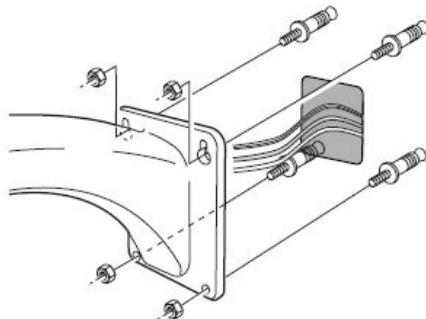

### 1 Install the bracket.

#### To the wall

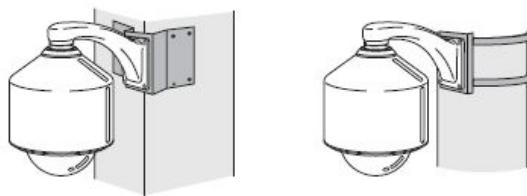

- ① While aligning the bracket base with the setup position, make four marks on the wall at the mounting bolt locations. Then make holes in these locations for the four M8 anchor bolts and insert the M8 bolts.
- 2 Make a hole for the connection cables in the wall in the middle of the bracket installation surface, and pull the cables all together through the wall to the outside.

## PART NAMES • SETTINGS • SETUP ②

- ③ Pass the connection cables through the hole in the bracket, and then align the bracket base with the four M8 bolts and tighten the M8 nuts to secure the bracket in place.

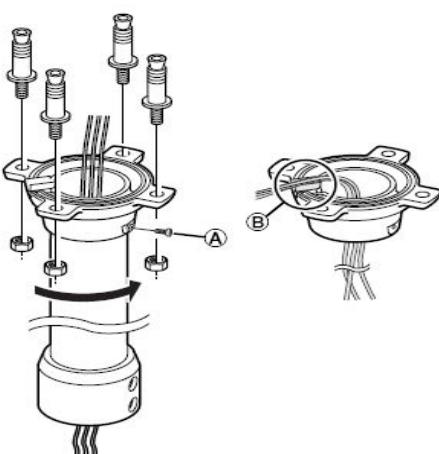

- You can use the mounting brackets (sold separately) shown in the illustrations below to install the camera to the corner of a wall or to a pillar.

#### Installation to a ceiling

- ① Loosen the bolts Ⓐ of the bracket base, and then turn the bracket base to remove it.
- ② While aligning the bracket base with the setup position, make four marks on the ceiling at the mounting bolt locations. Then make holes in these locations for the four M8 bolts and insert the M8 bolts.
- ③ Make a hole for the connection cables in the ceiling in the middle of the bracket installation surface, and pull the cables all together through the ceiling to the outside. If routing the cables along the surface of the ceiling, to use the cable groove Ⓑ in the bracket base.
- ④ Pass the cables through the hole, and then follow the bracket base with the four M8 bolts and firmly tighten.
- ⑤ After passing the connection cables through the bracket, firmly tighten the screws Ⓒ.

## PART NAMES • SETTINGS • SETUP ②

### 2 Connect the cables.

Connect all of the cables that have been passed through the bracket.

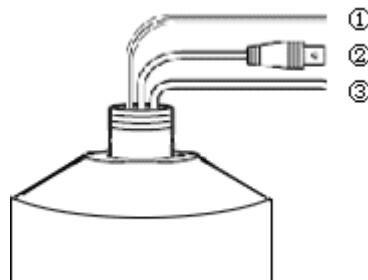

**1 Control cable:** Connect to the control cable out from the main cover (with shield), After

making the connection, to envelop by insulation rubberized fabric.

② **Video output cable:** Connect to the BNC connector that is coming out from the top of the main cover.

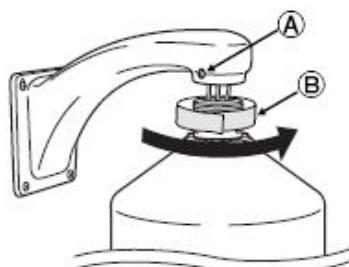

③ **Power supply cable:** Connect to the power supply cable out from the main cover. After making the connection, to envelop it by insulation rubberized fabric.

**NOTE:** Signs here be marked only in image, please identify the cable by the label in practice.

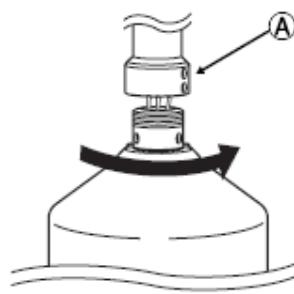

### 3 Install the main cover to the bracket.

Wind the accessory waterproof sealing tape ② around the connecting part of the main cover, screw the main cover clockwise into the bracket, and then securely tighten the screw ①.

#### TO the ceiling:

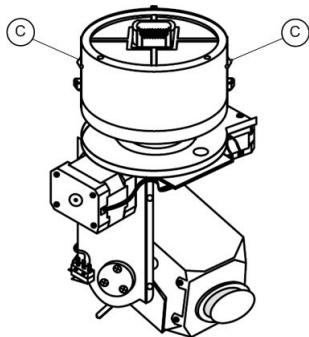

Install Main cover by clockwise into the base of bracket as followsings, then tighten the screws.

### 4 Install the camera unit.

Fit the orientation slot of camera unit into the orientation slot of base, push down the camera unit till the bolt is complete fitness. To check the camera if it is be locked, in case the camera fall off.

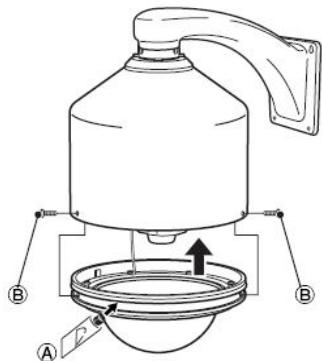

## PART NAMES • SETTINGS • SETUP ②

### 5 Install the dome cover.

After spread lubricating oil to the edge of dome cover **(A)**, fit the dome cover into the main cover and secure it by tightening the screws **(B)**.

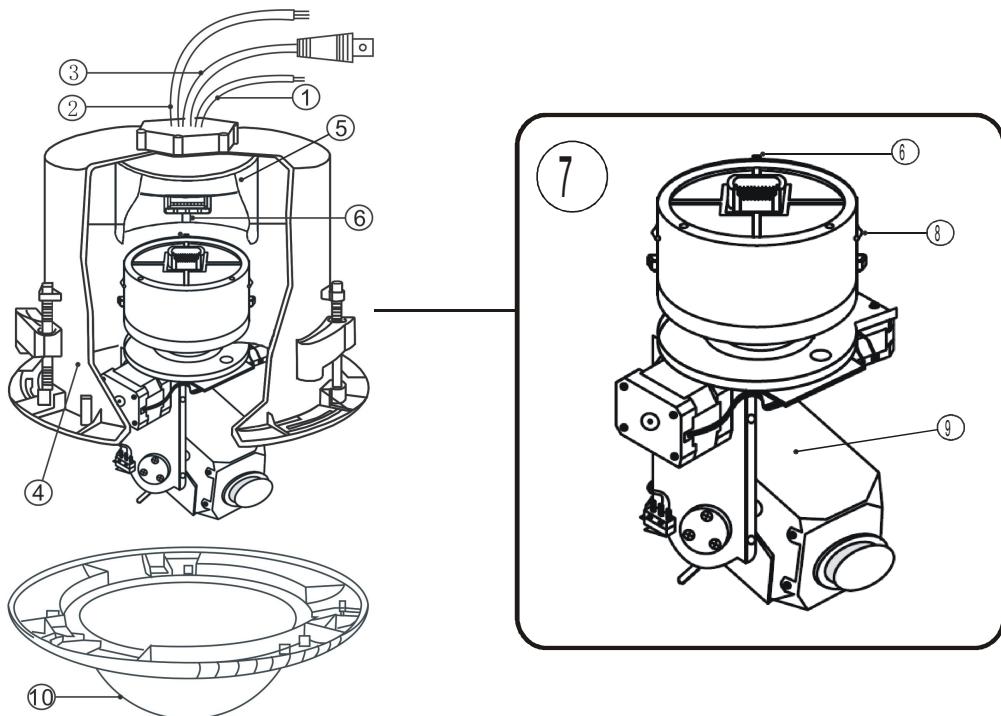

Note: Be sure to remove the lens cap from the camera before installing the dome cover.

## PART NAMES • SETTINGS • SETUP ③

**■PART NAMES**

TC3032□ceiling mount□

1 Power supply cable ② Control cable ③ Video output cable  
 ④ Main cover ⑤ Base ⑥ Orientation slot  
 ⑦ Camera drive ⑧ position lock ⑨ camera unit  
 ⑩ Dome cover

**■Setup****1 Install the bracket.**

① While aligning the bracket base with the setup position, make four marks on the wall at the mounting bolt locations. Then make holes in these locations for the four M8 anchor bolts and insert the M8 bolts.  
 ② Make a hole for the connection cables in the wall in the middle of the bracket installation surface, and pull the cables all together through the wall to the outside.  
 ③ Pass the connection cables through the hole in the bracket, and then align the bracket base with the four M8 bolts and tighten the M8 nuts to secure the bracket in place.

**■ Settings**

Same settings according to aboves.

**■ Setup**

When installing the ceiling type camera □PE3030V3□, please sign a position mark on the ceiling by use of follows method, and drill a hole of 225mm diameter.

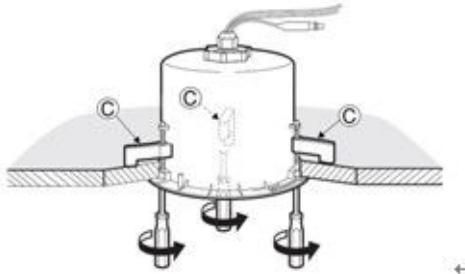

**PART NAMES • SETTINGS • SETUP ③****Installation condition:**

- **Ceiling thickness:** 0.8cm□0.38 inch□- 4.2cm(1.65 inch).

- **Carrying capacity:** 4 times of weight of camera.

### 1 Installing main cover to a ceiling

- ① Drill a hole of 225mm diameter in the position of ceiling.
- ② Pull out the three arm of main cover③, and adjust it fitness to the thickness of the ceiling, make it be locked of main cover.

### 2 Connect the cables.

Connect all of the cables that have been passed through the bracket.

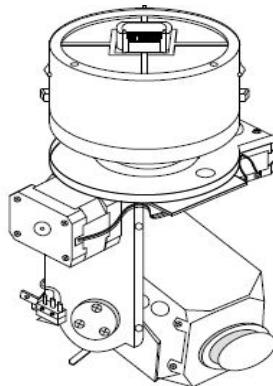

- ① **Control cable:** Connect to the terminals on the connection board inside the main cover (with shield), , to envelop by insulation rubberized fabric.
- ② **Video output cable:** Connect to the BNC connector that is coming out from the top of the main cover.
- ③ **Power supply cable:** Connect to the terminals on the connection board from the main cover, to envelop by insulation rubberized fabric.

#### NOTE:

- Also you could connect the cables before embedding the main cover into ceiling. Adapt the installation procedures in accordance with the circumstances.
- Sign here on the cables only be marked in the user manual, please recognize in practice the cable by the label On it.

### 3 Install the camera unit.

Fit the orientation slot of camera unit into the orientation slot of base, push down the camera unit till the bolt is complete fitness. To check the camera if it is be locked, in case the camera fall off.

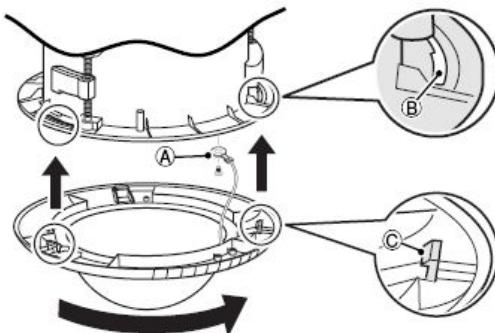

## PART NAMES • SETTINGS • SETUP ③

### 4 Install the dome cover.

- ① install the dome cover drip-prevention wire A in between the main cover and the dome cover.

- 2 align the projections C on the dome cover with the slot B in the base of the main cover, and then turn the dome cover to the right to secure it in place.

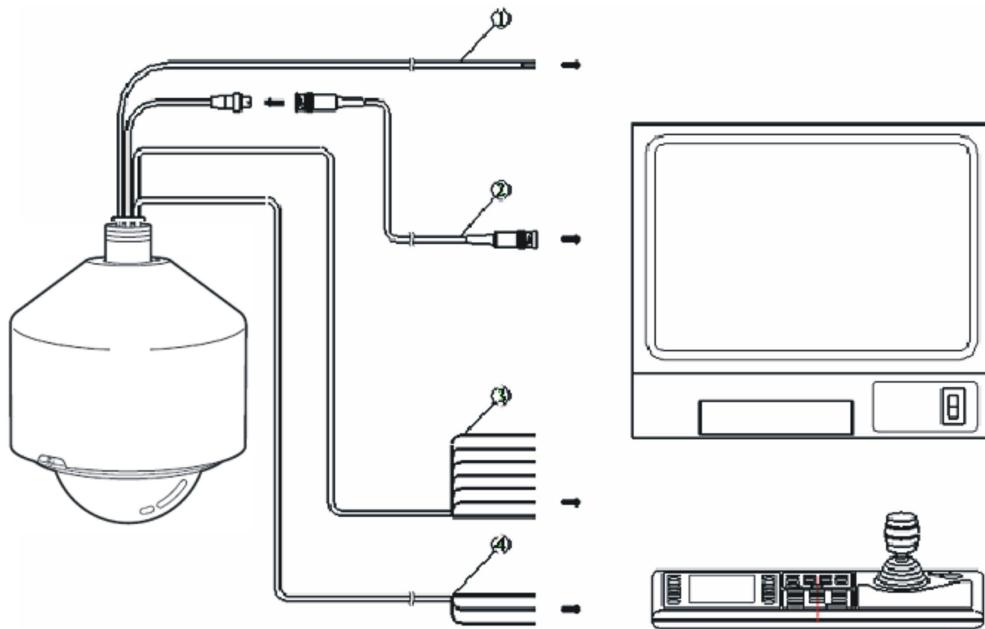

Note: Be sure to remove the lens cap from the camera before installing the dome cover.

## CONNECTIONS

Turn off the power for all equipment before making these connections. Read the instruction manuals for all of the equipment being connected. In addition, if the cables are connected incorrectly, it may cause smoke or incorrect operation to occur.

### ■ Connections for using RS-485 control

- 1 Power supply cable  $\square$  AC24V  $\square$  to connect to 24VAC power supply.
- 2 Video cable( $75\Omega$ )  $\square$  to connect to Monitor
- 3 Alarm inputs/output cable, 4ch alarm inputs and 2ch outputs, support NO/NC alarm

Remark: this connection can prevent short-circuit or cut-off, it should connect in side of sensor, as N.O. sensor connects a 2.2K resistance in parallel, N.C. sensor connects a 2.2K resistance in series, to make inputs be dis-alarm, if so, whether the sensor in N.C or N.O, alarm will be triggered.

To the alarm inputs port doesn't occupy, in order to avoid error to trigger alarm, we suggest to connect 2.2K resistance to mask.

- 4 Communication cable, to connect to RS485 A and B.

**NOTE:**

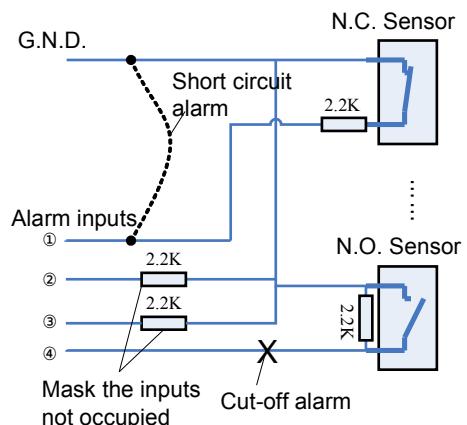

If the camera and the system controller are too far

Apart or overfull dome in same control device, the reliability of the control signals may drop.

as followings,

- Dome movement can not follow the command.
- Other dome will follow the command in control appointed dome.

If this happens, please use RS485 distributor, 120 $\Omega$  Terminal resistance and check the cables and signal transmission.

**Consumable parts**

The following parts are consumable parts. In addition, the service life for each part will vary depending on the operating environment and conditions of use.

- Lens
- Slip ring
- FPC cable

## OPERATIONS

### Speed dome operations by control device

Please refer to above for device connection and settings.

- 1 Connect all equipment and turn on the power.

When the power for the camera is turned on, the self-test function for the internal lens starts, and when it finishes, the individual information for that camera is displayed on the screen.

**Memory self-testing...**  
**SW1:10000100**  
**SW2:00001001**

**Protocol: PELCO P**  
**Buadrate: 4800**  
**Dome address: 1**  
**Camera type: Sony**

.....

- ☞ During self-testing, if the dome finds fault, it will stay on the fault period or indicate error information.
- ☞ The dip-switch setting in the self-testing is for factory inspection and user checking.

## 2, To have keyboard

To refer to the keyboard manual, to check and have same protocol, baud rate and address, then it can control the dome.

### Exception of Address 0 and 255:

- ☞ When dome address is 0, the controller chooses any address, it can control the dome.
- ☞ When dome address is 255, if the dome don't set the software address (set the address in the menu), any address of dome can be controlled
- ☞ When set address in menu, the dome will only follow the software address.

## 3, Speed dome operation

To refer to user manual of speed dome, to have direction movement, zooming, iris, focus, preset etc.

1, dome address    2, camera title    3, time & date    4, temperature inside  
5, to display all movement name, alarm information  
6, preset, preset number and title  
7, zoom            8, Pan/tilt angle    9, Direction

# OPERATIONS

## 4, Shortcut function

### Pearmain protocol

- 1) Enter into OSD menu
- 2) Preset setup, calling and clear, maximum 128 preset.

- 3) Cruise tour setup, calling and clear, maximum 4 cruise.
- 4) Pattern tour setup and calling, maximum 4 pattern.
- 5) Automatic scan setup and calling
- 6) To stop automatic movement.

### **Pelco protocol**

- 1) Enter into OSD menu  
'95' + <preset>+ '95' + <preset>  
Please ensure that it can not insert any action or command between '95' + <preset> and '95' + <preset>.
- 2) Preset  
Calling  $\square$ 'n' + <preset>  $n \leq 99$
- 3) Automatic scan  
Setup: '95' + <preset>+ '92'+ <PRESET>  
Calling  $\square$ '95' + <preset>+ '99'+ <PRESET>
- 4) Cruise tour  
Calling : '95'+ <PRESET> + '97'+ <PRESET>, only 1 cruise tour available here.
- 5) Stop scan  
'95'+ <PRESET> + '96'+ <PRESET> to stop all scan in auto priority.

NOTE: Above command can implement in menu, please refer to Menu description.

### **5, Advanced function**

The dome support follow advanced function

1, Remote updating the firmware of speed dome by RS485 bus

2, network management function

It can inspect current dome information, as followings,

- a. running normally or abnormally (it will indicate its abnormal running)
- b. horizontal/vertical position, zoom
- c. running status (usual running, preset, cruise, auto scan etc.)
- d. temperature, time, total running time
- e. absolute direction calling, it can accept the command with direction, zoom, to move the direction by preset
- f. relative direction calling, similar to absolute direction

above remote updating and Network management function must support semi-duplex communication mode.

## **OPERATIONS**

### **6, Quick query $\square$ details for attachment $\square$**

# MENU DESCRIPTION

Different protocol with different command to call OSD menu, command of PEARMAIN protocol is '99' + <SHOT>, PELCO protocol is '95' + <PRESET>+'95' + <PRESET>, Following operation in menu.

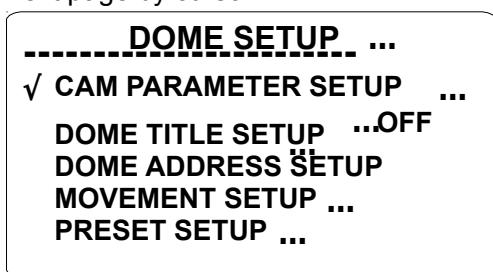

- 1 Move cursor: UP/DOWN/LEFT/RIGHT;
- 2 Enter into sub menu: RIGHT direction;
- 3 Exit to superior menu, LEFT direction, if LEFT has been used, to take CLOSE/OPEN□
- 4 To change numerical value: WIDE/TELE, UP/DOWN, preset calling.

Following is operation manual for the operation interface.

## Usual interface

If menu with "...", it indicate to have sub menu.

If menu title with "...", it means not to display menu information by 1 screen, it can go to next page by cursor.

UP/DOWN cursor: UP/DOWN direction

Enter into sub menu: RIGHT direction

Back to superior menu: LEFT direction

## Interface with clue

To follow the clue to operate step by step, e.g. the interface to control dome movement setup, e.g. Pattern, horizontal limit etc

To confirm to press □OPEN□ and cancel by □CLOSE□

## Increase/decrease frame interface

To increase numerical value: WIDE or UP direction

To decrease numerical value: TELE or DOWN direction

Shortcut key: to call preset (1 to 80 is available)

Exit the interface: CLOSE or LEFT direction

# MENU DESCRIPTION

## Choice frame interface

UP/DOWN cursor: UP/DOWN direction  
Confirm and Back: LEFT direction

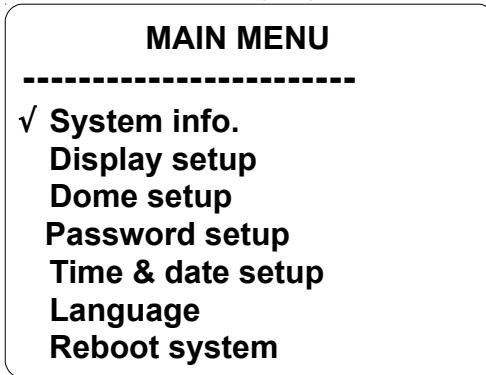

## Input frame interface

Zone 1: target zone, to display the input character.  
Zone 2: choice zone, to choose wanted information by direction key.  
Zone 3: to choose English or China and inputs method  
Remark: the character dwelled with cursor will flash, then to choose.  
To confirm character, and switch input method by TELE or WIDE;  
To delete input character by FAR or “←”  
To input Blank by NEAR or “█”;  
Exit input frame by CLOSE/OPEN or “√”;  
Next page: “↓”  
Input method description.:  
□□□ CHINESE  
□EN□ Number/ENGLISH Capital  
□en□ Number/ENGLISH lowercase  
□,.□ symbol

# MENU DESCRIPTION

## MAIN MENU

OSD menu including 7 sub menu: System information, Display setup, Dome setup, Password setup, Time & date setup, Language, setup, Reboot system, as followings,

To move cursor □“√”□ by joystick UP or DOWN to proper sub menu, to press right direction key to enter the sub menu, left key to exit.

Followings is detailed description of sub menus.

## SYSTEM INFO.( SYSTEM INFORMATION)□

To check system information of current dome, including product number, product date, product ID series, firmware version, protocol, address, baud rate, camera type, total run time, auxiliary switcher, alarm information, etc., it only for check information, can not revise.

## DISPLAY SETUP□

To set screen display information, including camera title, preset title, pattern title, cruise tour title, angle, zoom, alarm information, direction, dome address, time & date, temperature, display setup etc.

## DOME SETUP□

To set the dome parameter, including movement setup, preset setup, cruise setup, pattern setup, time-start setup, privacy mask setup, alarm setup, camera setup, initialization setup etc.

## PASSWORD SETUP□

To set dome password, including, password enable, input and revision.

## TIME & DATE SETUP□

To set time and date of dome, including YEAR, MONTH, DATE, HOUR, MINUTES, etc.

## LANGUAGE SETUP□

To set language of dome, currently CHINESE and ENGLISH available.

## REBOOT SYSTEM□

To reboot system without power Off, the information will not lose.

# MENU DESCRIPTION

## 1, SYSTEM INFORMATION

**System info....**

-----

✓ PRODUCT MODE **ITC 3030**  
 PRODUCT DATE **070700**  
 PRODUCT SERIES **000001**  
 VERSION NO. **V 2.00**  
 PROTOCOL **PE**  
 DOME ID **3**  
 BAUD RATE **9600**  
 CAM TYPE **SONY**  
 TOTAL RUN TIME **0 h**  
 AUX SWITCH **1020**  
 ALARM INFO. **OFF**

It displays main information of current camera, Product model, product date, product series, version no. have been set in initialization status, Protocol, Baud rate is from dip-switch pillar, Dome ID is from dip-switch pillar set or firmware set, camera type is the camera module in the dome, Total run time is to display total run time from initialization, AUX (Auxiliary) switch, Alarm info. Is to display alarm information. Left direction key to exit.

## 2, DISPLAY SETUP

**DISPLAY SETUP**

-----

✓ DOME TITLE **DIS**  
 PRESET TITLE **ENA**  
 PATTERN TITLE **ENA**  
 CRUISE TITLE **ENA**  
 ANGLE **ENA**  
 ZOOM **ENA**

## MENU DESCRIPTION

## F. ZOOM

To refer to fig.8

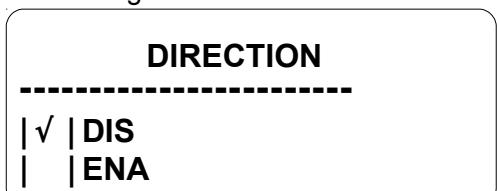

## G. ALARM

to display alarm information.

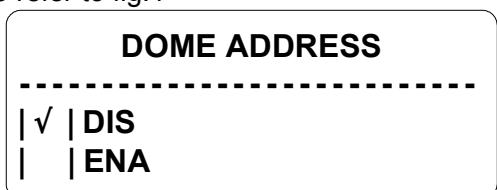

## H. DIRECTION

To refer to fig.10

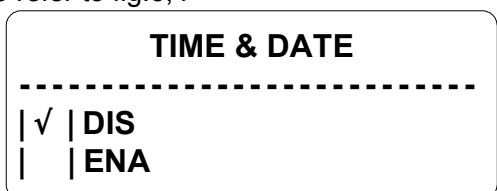

## I. DOME ADDRESS

To refer to fig.1

## J. TIME & DATE

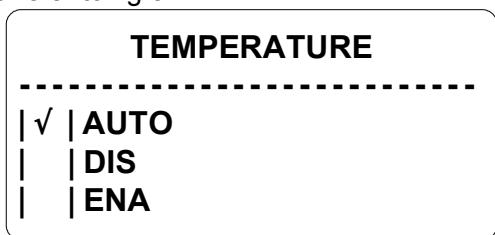

To refer to fig.3,4

# MENU DESCRIPTION

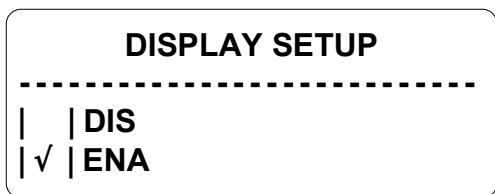

## K. TEMPERATURE

To refer to fig.5

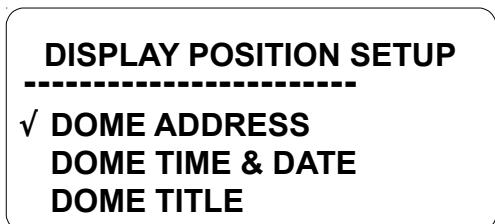

If in 'AUTO', the temperature will display on screen only the temperature inside of dome is higher 70°C

## L. DISPLAY SETUP

To set whether display or not all information on screen, if set in DIS, no information will display on screen, if want to display the parameters, please set ENA of DISPLAY SETUP first.

## M. DISPLAY POSITION SETUP

It's to set display position of dome ID, time & date, camera title on screen, right direction key to enter in the interface, to fix the display position by direction key, then to press <OPEN> to save and exit, <CLOSE> to give up.

# MENU DESCRIPTION

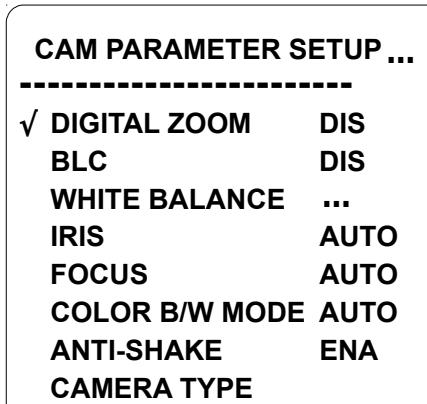

### 3, Dome setup

To move cursor □“√”□ by joystick UP or DOWN to proper sub menu, to press right direction key to enter and left direction key to exit.  
Followings is detailed description to its sub-menu.

#### A. CAM (CAMERA) PARAMETER SETUP □

To set camera parameter, including BLC (Backlight compensation), White balance, Auto Iris, Auto focus, digital zoom, color & B/W mode, Anti-shake and camera type etc.

To move cursor □“√”□ by joystick UP or DOWN to proper sub menu, to press right direction key to enter and left direction key to exit.

## MENU DESCRIPTION

### DIGITAL ZOOM □

**DIGITAL ZOOM**

|  | DIS  
|  | ENA

To choose whether start digital zoom, if in DIS, digital zoom is off, so the camera is only with optical zoom, if choose to run digital zoom, it will have it on optical zoom.

**BLC (Backlight compensation)**

**BLC**

|  | DIS  
|  | ENA

To choose BLC on or off

**WHITE BALANCE**

**WHITE BALANCE ...**

SYSTEM INFO.      AUTO  
R GAIN  
G GAIN

DIS or ENA is to set WHITE BALANCE to auto or manual, before adjust G GAIN or R GAIN, to set to DIS first.

**IRIS**

**IRIS**

|  | DIS  
|  | ENA

Iris DIS and ENA is to set auto IRIS or manual IRIS.

**FOCUS MODE**

**FOCUS MODE**

|  | MANUAL  
|  | AUTO
